

IN THE SPECIFICATION:

Please replace the Title with the following amended Title:

Telecommunication Service Processing Method and Apparatus Configurable
Telephone Calling Card

Please replace the Abstract with the following amended Abstract:

Embodiments provide a method, article of manufacture, and apparatus for
telecommunication service processing customizing a telephone calling card operation.

In one embodiment, a calling card may be customized to redial a last number by entering a pre-defined shortcut sequence. In another embodiment, a search tool is used to search for a particular number using one or more pre-stored address books.
